Projects

War of Brawns Prototype Capstone Project (C#):
- Mobile application that gamifies physical activity in a fantasy role play game where the storyline and character advancement rely solely on the gamers physical progress.
- Created by the War of Brawns team using Unity, Visual Studio, and Firebase while following Agile Software Development.
- Assigned group work according to team roles as team lead for prototype development and documentation.
- Developed features such as daily suggested caloric intake and manual input for workout tracking.

Novel-Alerts (Python):
- Desktop application for users to enter in URLs to receive email alerts on updates when detected.
- Created using PyQt5 while following the Model-View-Controller design pattern.
- Automated unit testing using the UnitTest framework and Travis-CI.
